

CLINICAL TRIALS LEAD TO NEW TREATMENTS

WHY ARE THEY SO IMPORTANT?

Clinical trials are the only way new treatment options can be approved & made available to patients.

Clinical trials can help determine if a treatment option is safe and more effective than other existing treatments.

A clinical trial may be a patient's best available treatment option.

DID YOU KNOW?

ONLY 3 OUT OF 100 PATIENTS PARTICIPATE IN CLINICAL TRIALS...

AND EVEN FEWER LUNG CANCER PATIENTS PARTICIPATE.¹

"Poor enrollment onto trials threatens to slow progress in cancer care at a time when advances in science are enabling new opportunities for prevention and treatment." (Denicoff et al 2013)

BY THE NUMBERS

1 in 4 NUMBER OF CLINICAL TRIALS THAT NEVER REACH FULL ENROLLMENT.²

85% ABOUT 85% OF PATIENTS ARE UNAWARE THAT CLINICAL TRIALS ARE TREATMENT OPTIONS.³

HELP US CHANGE THESE STATISTICS

We need more patients enrolled in clinical trials and innovative ways to address barriers standing in the way of progress.
